

Samaritan
DIAGNOSTICS

Our Mission

Samaritan Diagnostics exists as a response to a real and growing need for viable healthcare solutions for the uninsured and underinsured.

By eliminating risk, minimizing costs, and maximizing usage of existing assets, Samaritan aims to bring Medicare rates to those without insurance.

We want all the stakeholders in this process to benefit - providers, physicians, and patients.

Our vehicle is a scalable website with near unlimited potential.

Who We Are

Samaritan Diagnostics is a team of physicians, hospital administrators, and uninsured patients. We were born out of the experience of a practicing family physician who is also an investor in a number of rural hospitals. The prospect of making these reduced price arrangements grew from making these deals routinely in his own office. Everyday uninsured patients walk into doctor's offices and hospitals feeling trapped between out of reach costs and fear of the unknown. Samaritan was born as an answer to this problem.

A team of uninsured businessmen and hospital administrators has been assembled to build the necessary infrastructure for a viable solution.

We are the physicians who want to offer help to the uninsured. We are the providers who want to extend a hand to the uninsured while accomplishing the goals of our company. We are the uninsured patients who desperately need a solution.

We are acutely aware of the problems and we are diligently working towards the solution.

How We Work

We are in the process of developing a website that will generate test orders, take payments, and communicate between all parties.

For Providers, this website will:

- Eliminate risk of uncompensated care
- Work directly with existing workflow
- Expose providers to markets currently untapped

Samaritan
DIAGNOSTICS

How We Work - Continued

For Physicians

- One-page online referral form - no paperwork, no mailing or faxing
- Track test dates and times
- Enable access to previously unaffordable healthcare

For Patients

- Find, Choose, and Pay for the provider of their choice
- Pay Medicare rates for healthcare
- Access life saving diagnostics

The process is straightforward:

1. Patient goes to Physician
2. Physician goes online and creates an order for a test
3. Patient selects where to have test performed - online
4. Patient pays for the test - online
5. Test order information is sent to Provider
6. Provider confirms test was performed
7. Provider is paid via ACH bank transfer the following week.

We provide patients, physicians, and providers with unique accounts so that they can track, view, and manage their tests. For providers, we offer the ability to view custom reports, add services, and reconcile accounts.

Our Network

Samaritan's network is growing rapidly. We are contracting with providers across the country. Physicians from Pennsylvania to Florida will soon have access to this new online portal to help their uninsured population save money and get answers. Those with high deductible health plans and those without insurance are poised to make use of our valuable service.

Our plans are to reach the cash-paying uninsured patients and the physicians that take care of them all across the country.

To accomplish this goal we are partnering with labs, hospital groups, ASC groups, and ODC groups in all 50 states.
